

What Sublimation Is All About

Chemically, dye sublimation is when sublimation ink is heated in a heat press against a polymer coated surface. A gas is caused when the heat reaches a certain temperature and an image is permanently embedded into the surface.

Aesthetically, when specially coated tiles are heat pressed it is a unique and stunning single tile or multiple tile mural. In your home, place of business or swimming pool, it can transfigure the spot you choose to place it into a very personally decorated space.

ANY photo can be baked into the 6 different ceramic and glass tiles that come in 8 sizes. We can scan a printed photo, slide, negative, or use your digital photo to create your masterpiece. What you choose to put on the tile is up to you. Family, pets, favorite vacation spots or art reproduced into a beautiful memory on your wall, counter top, floor, pool, etc.

Once you see and touch these tiles you will be inspired with the enormous potential that this new art can do for you. It is your personal masterpiece or a gift to others.

fms digital, inc. was established in 1998 as a large format printing company and has added dye sublimation to the already diverse mix of products offered by the owner, Kathy Hadsall.

Due to the volume of holiday orders please call 303.744.9800 to let us know when you would like to come by their office at 4101 E. Louisiana Avenue; Suite 101; Denver, CO 80246.

In the meantime, please visit our website at www.fmsdigital.com. We have posted pricing and specs in PDF form so that we can answer any immediate questions about the tiles, t-shirts, and mouse pads.
